

BEST AVAILABLE COPY**IN THE CLAIMS**

The listing of claims replaces all prior versions, and listings, of claims in the application.

1. (Original) A method of destructively editing a time based stream of information in a processing system, the method comprising:
 - A) storing the time based stream of information in storage;
 - B) selecting a portion of the time based stream of information;
 - C) receiving a user deletion command; and
 - D) deleting the portion from the storage in response to the user deletion command.
2. (Original) The method of claim 1, further including providing reference data corresponding to the stored time based stream information and wherein the selecting is by extracting the reference data from at least a portion of a reference.
3. (Original) The method of claim 2, wherein the reference forms at least one new reference with reference data to the remaining time based stream of information.
4. (Original) The method of claim 3, wherein the extracted reference data is from a portion nested within the reference and the reference splits into a first new reference corresponding to the information prior to the extracted reference data and a second new reference corresponding to the information after the extracted reference data.
- 5 (Original) The method of claim 2, further including depositing the extracted reference data in a trash depository prior to deleting the portion.

6. (Original) The method of claim 1, wherein deleting the portion is by permanently eliminating the information from storage.
7. (Original) The method of claim 1, wherein deleting the portion is by defining storage space holding at least a portion of the information as available for reuse.
8. (Currently amended) A method for managing storage in a processing system, comprising:
 - A) storing a time based stream of information in the storage;
 - B) selecting at least a portion of the time based stream of information in response to a user selection command;
 - C) determining whether the portion is represented by more than one reference data containing processing information corresponding to the time based stream of information; and
 - D) deleting the portion from the storage if the portion is not represented by more than one reference data.
9. (Original) The method of claim 8, further including depositing corresponding reference data in a trash depository prior to deleting the information.
10. (Original) The method of claim 9, wherein the deleting is further if a cancel command is not received.
11. (Original) The method of claim 8, wherein the selecting is by extracting corresponding reference data from at least a portion of a reference.
12. (Original) The method of claim 11, wherein if a cancel command is received, the extracted reference data is replaced in the reference and the portion is not deleted.
13. (Original) The method of claim 11, wherein the reference forms at least one new reference to the remaining time based stream of information after extracting.

Serial No.: 09/679,721
Filing Date: 10/04/2000

3/17

Attorney Docket No.: 004860.P2472
Resp. to OA Dated 12/17/2004

14. (Original) The method of claim 13, wherein the extracted reference data is nested in the reference and the reference splits into a first new reference corresponding to the information prior to the extracted reference data and a second new reference corresponding to the information after the extracted reference data.
15. (Original) A method of claim 8, wherein the deleting is by permanently eliminating the information from storage.
16. (Original) A method of claim 8, wherein the deleting is by defining storage space holding at least a portion of the information as available for reuse.
17. (Original) A time based stream of information processing system comprising:
- A) a capture port for acquiring time based stream of information;
 - B) a storage for storing the time based stream of information;
 - C) a display device; and
 - D) a processor for selecting a portion of the time based stream of information and deleting the portion from the storage in response to a user deletion command.
13. (Original) The system of claim 17, wherein the display device includes a deletion control.
19. (Original) The system of claim 17, wherein the storage further includes at least one reference having data corresponding to the time based stream of information and the processor is further for deleting the reference data.
20. (Original) The system of claim 19, wherein the processor is further for forming at least one new reference with reference data to the remaining time based stream of information after deleting the reference data.

21. (Original) The system of claim 17, wherein the storage further includes a trash depository for temporarily storing the reference prior to deleting the portion.
22. (Original) The processing system for destructively editing a time based stream of information to generate a presentation comprising:
- A) means for storing the time based stream of information in storage;
 - B) means for selecting a portion of the time based stream of information;
 - C) means for receiving a user deletion command; and
 - D) means for deleting the portion from the storage in response to the user deletion command.
23. (Original) The system of claim 22, further including a means for providing a reference corresponding to the stored time based stream information and wherein the selecting is by extracting at least a portion of the reference.
24. (Original) The system of claim 23, wherein the extracted reference forms at least one new reference to the remaining time based stream of information
25. (Original) The system of claim 24, wherein the extracted portion is from a portion nested in the reference and the reference splits into a first new reference corresponding to the information prior to the extracted portion and a second new reference corresponding to the information after the extracted portion
26. (Original) The system of claim 22, wherein the deleting is by permanently eliminating the information from storage.
27. (Original) The system of claim 22, wherein deleting the portion is by defining storage space holding at least a portion of the information as available for reuse.
28. (Original) A computer readable medium having stored therein a plurality of sequences of executable instructions, which, when executed by a processing

system for collecting a time based stream of information and generating a presentation, cause the processor to:

- A) store the time based stream of information in storage;
- B) select a portion of the time based stream of information;
- C) receive a user deletion command; and
- D) delete the portion from the storage in response to the user deletion command.

29. (Original) The computer readable medium of claim 28, further including additional sequences of executable instructions, which, when executed by the processor, cause the processor to provide a reference corresponding to the stored time based stream information and wherein the selecting is by extracting reference data from at least a portion of the reference.
30. (Original) The computer readable medium of claim 29, wherein the extracted reference forms at least one new reference with reference data to the remaining time based stream of information.
31. (Original) The computer readable medium of claim 30, wherein the extracted reference data is from a portion nested in the reference and the reference splits into a first new reference corresponding to the information prior to the extracted reference data and a second new reference corresponding to the information after the extracted reference data.
32. (Original) The computer readable medium of claim 29, further including additional sequences of executable instructions, which, when executed by the processor, cause the processor to deposit the extracted reference data in a trash depository prior to deleting the portion
33. (Original) The computer readable medium of claim 28, wherein deleting the portion is by permanently eliminating the information from storage.

34. (Original) The computer readable medium of claim 28, wherein deleting the portion is by defining storage space holding at least a portion of the information as available for reuse.

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

☒ BLACK BORDERS

☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES

☐ FADED TEXT OR DRAWING

☒ BLURRED OR ILLEGIBLE TEXT OR DRAWING

☐ SKEWED/SLANTED IMAGES

☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS

☐ GRAY SCALE DOCUMENTS

☒ LINES OR MARKS ON ORIGINAL DOCUMENT

☐ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY

☐ OTHER: _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
